Colonoscopy  
Laparoscopy (peritoneoscopy)  
Thoroscopy  
Mediastinoscopy  
Cystoscopy  
Hair Replacement Surgery

For years men and women have sought remedies for baldness and thinning hair. They tried everything from expensive lotions and hairpieces to surgical plugs which often left unsightly rows or tufts of oddly growing hair. Now a state-of-the-art transplantation technique known as micro- and minislit grafting provides effective treatment for hair loss, with natural-looking results.

"Hair transplantation can make men and women look years younger and help them feel more attractive," says Paul W. Weiss, D.O., surgical director of Hair Restoration Surgeons, Inc., the physicians who perform surgery at each hair replacement center. "Micro- and minigrafting allow us to move one to four hairs at a time, which eliminates the corn row or doll's hair effect." When used with appropriate scalp reduction procedures for male pattern baldness' excellent results can be achieved.

Each facility is designed for hair transplant surgery and scalp reduction. Without traveling to a distant, impersonal medical complex, patients can be treated in modern surgical suites designed for comfort and efficiency.

Dr. Weiss, clinical professor of surgery at Ohio University of Osteopathic Medicine and chief of surgery at Youngstown Osteopathic Hospital, was attracted to the facilities because of their excellent working conditions. Each facility is also suited for mega- sessions during which more than a thousand minigrafts are placed in a single visit.

Dr. Weiss is a board certified general surgeon and director of surgery of Hair Restoration Surgeons, Inc., a group of surgeons who perform hair replacement procedures in Cleveland, Dayton, Toledo, Indianapolis, Ft. Wayne and Louisville.
